

CAS Statement

In light of the actual characteristics of the product and the varying requirements across countries and clients, and in order to avoid inconsistencies and lack of rigor in documentation, our company, after thorough consultation with the technical department, has decided to update the CAS number associated with Product OLAPINE OIL 85. The CAS number will be changed from 8006-39-1 to 98-55-5.

We believe this change is well-founded and justified for the following reasons:

1. In our original compliance documentation, CAS number 8006-39-1 referred to a mixture of fusel alcohols, while the updated CAS number 98-55-5 refers specifically to alpha-terpineol. The former is vague, whereas the latter offers clear and precise identification.
2. Product A comprises various types of alcohols, as detailed in our technical specifications. The component corresponding to CAS number 8006-39-1 represents the predominant substance in the product, accounting for over 80% of its composition.
3. CAS number 8006-39-1 is listed in the TSCA Inventory, while 98-55-5 is not.

In summary, we believe that updating the CAS number will improve regulatory compliance and better reflect the actual composition of the product.

This statement is issued to formally explain the reason for this change. Please find attached the updated technical documentation. We kindly request your cooperation in cross-checking the documents we have sent your company, including but not limited to purchase orders, invoices, technical specifications, Safety Data Sheets (SDS), questionnaires, and various certificates. Should there be any missing documents, please feel free to contact us at any time.

Authorized Signature:

A handwritten signature in black ink, appearing to read 'Chelsea Chen', written over a horizontal line.
